DETAILED ACTION

Election/Restrictions

1. Applicant's confirmed election of the species defined by claim 3, i.e., a copolymer of unsaturated dicarboxylic acid or derivative thereof and vinylaromatic monomer, in the reply filed on February 27, 2009 is acknowledged.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 5-8 and 10-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 02066558 in view of US 2003/0162900 (Joachimi et al) as per reasons of record.

WO '558 discloses an impact-modified composition comprising A) 5-95 wt.% polyamide, B) 5-95 wt.% acrylonitrile-rubber-styrene copolymer optionally comprising polyamide-compatible functional groups, C) 0-30 wt.% one or more compatibilizing agents comprising polyamide-compatible functional groups, D) 0-30 wt.% elastomer and E) 0.1-30 wt.% lamellar mineral particles. In Table I, the compositions additionally contain 1 wt.% of component F1) comprising lubricants, carbon black and nigrosine.

Although the amount of the individual ingredients of component F1) is not further specified, it is reasonably believed that said component would comprise at least 0.1 wt.% of each

of the carbon black and nigrosine materials. In any event, it is maintained that it would have been obvious to one having ordinary skill in the art to have employed the presently claimed amounts of carbon black and nigrosine in that said amounts are conventional, absent evidence of unusual or unexpected results.

Response to Arguments

4. Applicant's arguments filed February 27, 2009 have been fully considered but they are not persuasive.

Applicants have amended the claims to clarify that both the carbon black and the branching agent are requisite components, as opposed to alternatives of each other.

Applicants' reliance on the experimental data per Table 2 has been noted but is not deemed probative of unexpected results. In this regard, the presence of unfixed variables is noted, e.g., different amounts of branching agent and nigrosine. Accordingly, it is unclear as to how the rheological behavior of examples I, II and III can be considered unexpected. Furthermore, it is noted that the showings are limited to a specific branching agent, whereas, the present claims are not so limited.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
